What We Do

OAN Vendor Maintenance

The OAN Vendor maintenance application is an application where People, Process and Technology come together. Technology is used to build a process which balances automation with data quality control which empowers people to focus their efforts on the areas which require attention and improvement.

OAN Vendor Maintenance

Benefits

- Predefined Vendor Workflow with Request Types: New & Update
- Configurable Vendor Onboarding Workflows: Maintenance & Conversions
- Supports Masters Data Management “MDM”: Vendors, Vendors Sites, Vendor Contracts, Vendor Banking
- Supports Customer Specific Business Rules
- Inter-Departmental Collaboration
- Advanced Approval Routing
- Supplier MDM Duplicate Checking
- Supplier Audit Support
- 3rd Party Vendor Compliance Hooks
- Support Vendor Attachments (Tax Forms, Compliance Forms, Contracts)
- Pre Built Reports & Self Service Reporting
- PreBuilt Oracle Connector
- *Additional Languages Upon Request: Dutch, French, German, Italian, Polish, Portuguese

OAN Vendor Maintenance

Process

-a series of actions or steps taken in order to achieve a particular end.

- Vendor requests are guided through the invoice lifecycle with the use of a standard set of workflows, steps, statuses, and actions which ensure the documents are fully prepared for the final destination...the ERP system
- Workflows are fully configurable to meet your specific business needs
- Standard and custom business rules are applied to keep the document on the right track
- Summary views and reports bring visibility to process trends and bottlenecks
- The portal unifies Vendor Onboarding requests to follow a single global process
- Audit and Compliance support is provided via Recorded Event History throughout the entire process

The process cannot be made a reality without the use of technology ...

OAN Vendor Maintenance

Technology

-the activity of designing and constructing and programming computers to better people at work, school, home, etc...

- Provides user interface which is pleasant and easy to use
- Platform to efficiently gather the information to support vendor creation or updates
- Tightly integrates with ERP system
- Utilization of ERP setups and configurations to apply specific business rules/validations
- Seamless interface process into the ERP system
- Apply business rule logic to:
 - Automate the derivation of data
 - Automate the triggering of flow actions
 - Identify exceptions
 - Real-time metrics
- Easily integrates with existing User Security software
- Application screens and forms support multiple languages to allow localizations
- Duplicate Vendor Detection
- Integration with common User Security platforms
- Role-Based Security by Shared Service Center
-

Who experiences the benefits of building a solid process on top of reliable technology?

OAN Vendor Maintenance

People

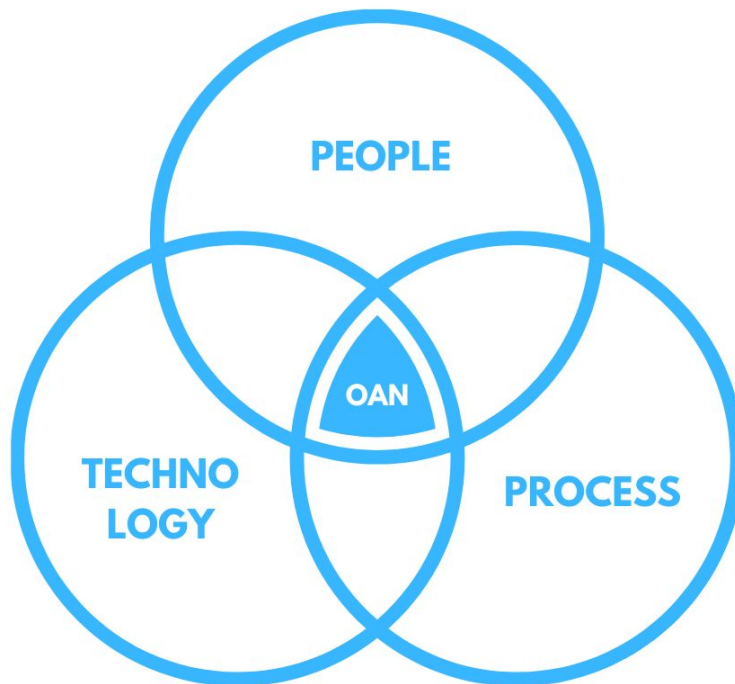

-any particular group of human beings

- The right people are seeing the right set of data that helps to make the best decisions
- Provides ability for team members from different groups to collaborate online to maintain vendors
- Prevent duplication of vendor information
- Reduce time spent researching Vendor Onboarding issues
- Vendor onboarding team can focus on the analysis and processing of exceptions versus data entry activities
- Users are held accountable to process their documents in a timely manner
- Managers can identify bottlenecks and spot process improvement

The cycle continues with People using these improvements to improve the overall Process!

What We Do

The oAppsNET AP Automaton application is where People, Process and Technology come together. Technology is used to build a process which balances automation with data quality control which empowers people to focus their efforts on the areas which require attention and improvement.

PEOPLE

We base all our automation implementations around the people who will be affected by them and who will be direct users by being empathetic throughout the entire process.

PROCESS

Your team and resources will be focused on the processes that are driven by specific data gathered during all analytical stages of implementation and execution.

TECHNOLOGY

The foundation and key components of a well-implemented ERP solution are only as valuable as the technology it revolves around.

About Us

At oAppsNET, we believe there's a better way to harness the power of information and analytics in the age of digital disruption.
